1. Claims 4-9 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

- 2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
- 3. Claims 1-3, 10 and 11 are allowed. The prior art discloses determining the time of arrival of a pulse by taking a time average of the positive and negative crossings of a threshold. The prior art does not disclose measuring the delay between first and second signals, delay-determining means operable to use event data to define respective staggered segments of a second signal associated with upcrossings and downcrossings, summing the segments to detect a predetermined feature in said sum, and the position of said feature representing the delay between the first and second signals as recited in claim 1.

The prior art does not disclose measuring the delay between first and second signals appearing at locations which are remote with respect to each other including at least a first device being operable to transmit event data representing the times at which predetermined events occur within the first signal, and at least a second device being operable to receive the event data, the event data used to define respective staggered segments of the second signal, combining said segments, detecting a predetermined feature in said combination, the position of said feature representing the delay between the first and second signals as recited in claim 8.

The prior art does not disclose measuring the shift between first and second signals, by combining segments of the second signal which are staggered by the intervals between signal events, detecting the position within the combination of a peak value, with said position representing said shift as recited in claim 11.
